ABOUT ME

First-year B.Sc. AI & Data Science student who builds things. I work across the full stack — designing interfaces, planning backend structure, and using AI tools as a real part of how I develop, not just a shortcut. Most of my projects start from a genuine interest in quality: clean UI, thought-out architecture, and code that could actually go live. I'm aiming toward data architecture long term, and I'm building the technical base for that now through coursework, independent projects, and a lot of hands-on experimentation.

PROJECTS

Personal Portfolio Website

2024 — Ongoing

Cinematic personal site — animations, parallax, smooth transitions, CMS/admin layer, full deployment.

- Designed the entire UI from scratch with Framer Motion animations, parallax scrolling, and page transitions aimed at a premium, film-like feel.
- Planned an admin/CMS layer so content can be managed without touching code — structured the backend and database schema for it.
- Built with Next.js, Tailwind CSS, and TypeScript; deployed on Vercel with mobile-first responsive layout.

E-commerce Platform — Architecture & Planning

2024

Full-stack marketplace concept — product pages, cart, auth, payment gateway, order management, deployment plan.

- Mapped out the full project structure before writing code — database schema, API routes, auth flow, and payment integration using Razorpay.
- Planned an admin panel for order tracking and product management, with a clear backend separation using Node.js and PostgreSQL.
- Focused on making the architecture realistic and deployable, not just a concept sketch.

Graphic & Visual Design Work

2023 — Ongoing

Thumbnails, posters, social media assets — Photoshop, CapCut, DaVinci Resolve.

- Created promotional visuals, YouTube thumbnails, and brand-style assets with a focus on clean typography and visual hierarchy.
- This work directly informs how I approach UI design — composition and layout thinking carries over.

EDUCATION

B.Sc. Artificial Intelligence and Data Science

2025 — 2028 (Expected)

AMET University, Chennai · Currently in 1st Year

SKILLS & TOOLS

HTML / CSS / JavaScript | TypeScript | React | Next.js | Tailwind CSS | Framer Motion
Node.js | Express.js | NestJS (basics) | PostgreSQL | MongoDB | Prisma (basics)
GitHub | Vercel | Render | Photoshop | CapCut | DaVinci Resolve
Google AI Studio | Claude AI | Gemini AI | Prompt Engineering | AI-integrated workflows

WHERE I'M HEADED

Data architecture is where I want to end up — designing the systems that sit behind products and make data actually usable at scale. Right now I'm building toward that by learning both sides of the stack, getting comfortable with database design, and staying close to AI tooling as it evolves. I'm also interested in roles where development and design thinking overlap — building things that work well and look considered at the same time.
